Jan Document Plugin - Calibration Document

Generated: 2026-01-10 16:14:37

Purpose

This document is used to verify that the Jan Document Plugin is correctly extracting and indexing PDF content. After uploading this document, you can ask specific questions to confirm the system is working properly.

Calibration Magic String

The unique calibration identifier is: **JANDOC_CALIBRATION_V1_VERIFIED**

If the AI can tell you this exact string, PDF extraction is working correctly.

Test Numbers

The test numbers are: 42, 137, 256, 1024, 2048
The sum of these numbers is: **3507**

Technical Components

This plugin uses the following technologies:
• ChromaDB vector embeddings
• sentence-transformers all-MiniLM-L6-v2
• Tesseract OCR engine
• FastAPI uvicorn server

Default Configuration

Setting	Value
Proxy Port	1338
Jan Port	1337
Embedding Model	all-MiniLM-L6-v2
Vector Store	ChromaDB

Auto-inject Context	True
Max Context Tokens	8000

Verification Questions

After uploading this document, ask the AI these questions to verify extraction:

Question	Expected Answer
What is the calibration magic string?	JANDOC_CALIBRATION_V1_VERIFIED
What embedding model does this plugin use?	all-MiniLM-L6-v2
What is the sum of test numbers?	3507
What port does the proxy run on?	1338

Character Extraction Test

Pangram: *The quick brown fox jumps over the lazy dog*
This sentence contains every letter of the alphabet and tests character extraction.
